AI-First Transformation COO · Operating-Model Architect · Platform Scaler

Frontier-Model Adoption · AI-Native Operating Systems · M&A Integration · Private Equity Value Creation

EXECUTIVE SUMMARY

Operations executive leading one of the only true AI-native operating-model transformations in hard services, a sector still anchored in rollup consolidation, EBITDA preservation, and legacy system monoliths that block real change. I own a \$495M P&L within a \$600M+ technology-enabled facilities platform, directing more than 2 million work orders a year across a 100% asset-light model. Over two decades scaling complex, service-based businesses in private-equity-backed and public-company environments, I have moved from running technology-enabled operations to architecting AI-native ones, where frontier models and AI primitives sit at the core of how the business plans, decides, and learns.

Most operators in physical-services businesses are not attempting this. The hard part is not the technology; it is rebuilding a live, field-dependent operating model around AI without breaking client SLAs, culture, or cash flow. That is the work I do, and I am also founding two AI-native companies from the ground up, which keeps the thesis tested in shipped product, not slideware. I operate at full enterprise scope and am suited to a President and COO mandate or a CEO seat where operational execution drives the value-creation plan.

WHAT SETS THIS OPERATOR APART

Category-of-one in hard services. Physical-services companies are stuck in rollup math, EBITDA preservation, and legacy system anchors. I am rebuilding an actual field-services operating model around frontier models, agentic workflows, and AI primitives, so the system runs the work and compounds margin instead of merely assisting headcount.

Transformation that protects the P&L. I redesign live, revenue-generating operations without breaking client SLAs, culture, or cash flow. That is the difference between an AI strategy deck and an AI operating company that earns the return.

Builder credibility. Founder of two AI-native platforms (No Doubles Golf Co. and Carevazo), proof that I architect intelligent systems and own the outcome, not just sponsor a budget line.

PE value-creation fluency. I align operating model, org design, and systems directly to the value-creation plan, and I translate that into EBITDA, throughput, and exit readiness sponsors can underwrite.

PROFESSIONAL EXPERIENCE

Vixxo — Scottsdale, AZ 2019 – Present

Chief Operating Officer | Chief Technology & Supply Chain Officer | Chief Technology Officer

\$495M P&L within a \$600M+ platform · 300+ direct reports · 3,500+ service providers · 150,000+ technicians · \$450M third-party spend

Elevated through three successive C-suite mandates across two ownership groups, from CTO to Chief Technology & Supply Chain Officer to COO, at a national, technology-enabled facilities platform backed by Wind River Holdings and Braemont Capital. Charged with making the company AI-first at its core, the rare attempt at a genuine AI-native operating model inside a live, field-dependent hard-services business.

- Own the transformation of Vixxo into an AI-first company, moving the enterprise off legacy, tribal-knowledge workflows and onto an AI-native operating model where frontier models and AI primitives drive how the business plans, decides, and serves customers.
- Built and operationalized an agentic AI solution that raises technician proficiency, reduces time on task, and increases daily service capacity across a 150,000+ technician network, converting AI investment into measurable field throughput.
- Carry full operational accountability across field operations, supply chain, customer experience, and enterprise systems, owning the cost-to-serve and throughput levers that determine enterprise value; improved operating margin by 2.5 points through direct-cost reduction and integration discipline, and

delivered \$5M+ in structural savings through a dedicated cost program, including \$3M in annualized IT expense and 60+ Operations roles.

- Restructured IT to a primarily outsourced delivery model, reducing annual IT spend from \$13.3M to approximately \$11.1M, and modernized scheduling, dispatch, and enterprise analytics to give field operations and finance proactive, real-time decision support.
- Lead the post-acquisition integration of Cushman & Wakefield Facility Services, aligning people, systems, and SLAs across the newly combined platform and reducing direct cost structure by 3%, one of multiple tuck-in acquisitions folded into a single operating model without dilution to service or margin.
- Serve as executive sponsor for Fortune 500 retail and convenience clients including 7-Eleven and Target, maintaining strategic alignment and delivery at the most demanding tier of the book.
- Partner directly with private equity sponsors on the value-creation plan and recapitalization readiness, aligning org structure, systems, and leadership to the return the sponsors are underwriting.

No Doubles Golf Co. — Co-Founder2024 – Present

AI-Native Sports Performance Platform

Co-founded and am building from the ground up an AI-native sports performance platform, architecting the product, data, and model layer directly. The build keeps my transformation thinking honest about what it takes to stand up an intelligent system and turn it into a business, not just sponsor one.

Carevazo — Founder2025 – Present

AI-Native Care Coordination Platform

Founder of an AI-native platform built for families navigating autism, special-needs, and elder care, some of the highest-stakes, highest-stress coordination environments anywhere, where fragmented information across providers, agencies, and caregivers carries a real human cost. Carevazo uses AI to observe and synthesize across that fragmentation so families are not the only connecting node. A passion and family project, built on genuine white space, and a second ground-up proof that AI belongs at the core of the operating model, designed from the person outward.

VEREIT, Inc. (NYSE: VER) — Phoenix, AZ2008 – 2019

Senior Vice President, Chief Information Officer

- Directed IT, cybersecurity, and enterprise systems through a financial restatement, SEC and federal investigations, and SOX remediation, remediating 9 material weaknesses and redesigning 120+ accounting and IT controls while preserving operational continuity and protecting enterprise value.
- Reported quarterly to six boards across the public company and managed funds, partnered with independent counsel and regulators through the internal investigation and restatement, and led the cloud-first transformation and new financial reporting system that modernized the platform to public-company standards.

Earlier Career1993 – 2008

Pearson Education · DHL Express · WebMD · U.S. Army (Military Intelligence)

- **Operations and technology leadership across global services and logistics:** Director of Operations for Pearson's K-12 platform; Global Technology Integration Lead at DHL Express, running M&A integration for Airborne Express and DHL Mexico on a \$120M+ budget; claims-processing modernization and HIPAA compliance at WebMD.
- **U.S. Army, Military Intelligence:** U.S. Army veteran; led mission-critical intelligence operations, building operational discipline and decision-making under pressure.

EDUCATION

B.S., Information Technology, University of Phoenix

VOLUNTEER LEADERSHIP & PHILANTHROPY

Sponsor, Southwest Autism Research & Resource Center (SARRC) · Benefactor, Bob Miller Memorial Scholarship, Mountain View High School
